

replacement mine from glass fibre for 2-168

Ø 2 mm, PU 1

Item no. **2-169**
 content 1 pcs

Specification

bristles made of glass fibre
bristles-length 112 mm
for cleaning soldering or welding spots
for rust removal, polishing, grinding of smallest parts
for corrections or etchings
brush Ø 2 mm
Made in Germany
length 112 mm
weight 0.5 g

Application and technology

SPARE PARTS for: Glass fiber eraser / rust eraser as handy and practical assistant for corrections or etchings, for cleaning soldering or welding points (before and after), for rust removal or polishing as well as grinding of the smallest surfaces. The eraser is also happy to be used in modeling, smooth surfaces or clean, lighten, and clean wood. Likewise, adhesive residue on window glass can be removed.

We recommend to try the glass fiber eraser in an invisible area if necessary. The Glass-fibre eraser consist of a writing sleeve, which is, depending on the size, a 2 or 4 mm thick glass fiber mine. The integrated turning or printing mechanism allows infinitely variable length variation of the glass fiber lead. If a mine is used up, it is simply exchanged for a replacement mine.
